

Slide Club Meeting No. 69 Oct. 12, 1979
90 Clearwater rd.

Present: W.S. Hwang, B. Johnston, R. Stark, D. Owen, R. Banerjee, L. Lu
Distinguished guest: D.C. Dahlin
Regrets: B. Orr, N. Pettigrew

- 1 Case 5 60 years old lady had a left groin mass since childhood. Her clitoris is large. The uterus and adnexa are not palpable.
Contributed by J. Rosai Sertoli cell tumor
- 2 6843-79 22 years old man had experienced hip pain for 1½ years. The pain is more severe at night.
Contributed by L. Lu Sclerotic bone, left femour
- 3 6855-79 A smooth hyperemic papule has been excised from the thumb of a 47 years old lady who had similar lesions removed from both elbows 1 year previously.
Contributed by B. Johnston Milker's nodule, skin
- 4 17703-79 85 year old lady, pigmented lesion of her face
Contributed by N. Pettigrew Melanoma arising from malignant lentigo, level 4, skin
- 5 RB79-2016P Female 82 years. Large solid ovarian tumor, 10 cm. in diameter. Other ovary and uterus NAD.
Contributed by D. Buntine Malignant endometroid adenofibroma
Dr. Scully's consultation Endometroid adenofibroma, borderline malignancy, Ovary
- 6 79-WH 16A Stillborn infant. Ultrasound prior to delivery suggested hydranencephaly. The infant died just prior to delivery.
Contributed by D. Buntine Encephalitis, intrauterine, etiology undetermined
- 7 A61- 109 1½ year old boy died of a traumatic head injury. Had neonatal giant cell hepatitis.
Contributed by W. Hwang Cirrhosis of liver due to alpha-antitrypsin deficiency
- 8 16364-79 Female aged 60. Polyp form sigmoid colon
Contributed by D. Owen Hyperplastic polyp with adenomatous and papillary features
- 9 PH 79-67-13 and 25 71 year old man, known diabetic with hypertension, died of cardiopulmonary arrest. At autopsy unexpected widely disseminated malignancy present -13 from abdominal and mediastinal -25.
Contributed by R. Banerjee Composed ^{of} lymphoma, HL and NPDL
- 10 14879-79 Female 37 years, mass in groin present for many years.
Contributed by T. Cooney Hemangiopericytoma
- 11 7880D-79 M.K. Male, aged 87. History of abdominal distension and general features of intestinal obstruction.
Contributed by R. Stark Pneumatosis intestinalis, colon
- 12 18026-79 Female aged 63 years. Recurrent aural polyp
Contributed by H. Benediktsson Jugular paraganglioma
- Next meeting: Dr. Hwang's place, Nov. 23, 1979

OCT. 17. 79

Dear Juan:

Enclosed are the slides & minutes of our October meeting. Because of Dr. Daklin's visit, the meeting is moved forward.

We would appreciate your comments of two cases.

1/ Dr. Bantonia's case RB 79-2016 P. If you feel this case would be a good one for Minnesota's seminar, I can write to Dave and ask for material.

2/ Dr. Cooney's case 14879-79.

Thank you for the duplicate of the case of angiosarcoma.

Dr. Daklin's visit has given us a very good discussion in some bone tumor cases. If you are interesting in the slides I can let you having a chance to look at them.

Thank you for your attention.

Sincerely yours

Lawrence

Dear Larry:

Thank you for sending me the slides and minutes of the October meeting. Regarding the two cases in which you are requesting my opinion, I agree with the diagnosis of hemangiopericytoma in Dr. Cooney's case (#10) and I agree with Dr. Scully's diagnosis of endometrioid adenofibroma of borderline malignancy for case 5. The ovarian tumor will indeed make a good case for a future tumor seminar. I will appreciate if you could ask Dave to send me wet tissue or a good number of paraffin blocks for that purpose. See you next month in Minneapolis.

Best personal regards,

Juan Rosai, M.D.
